

### Small-town station

This setting at the rear of the layout doesn't provide much room for extensive scenery. However, various signature scenery elements, including a plowed field, a country road grade crossing, and an uncluttered backdrop graphic, help create a realistic rural setting.

*Realistic Model Railroad Building Blocks* (KalmbachBooks.com) is a great reference for helping layout builders assemble scenes like this one

### Main passenger station

The terminal structure is above the tracks at street level. Stairs lead to the platforms at track level. The city is thriving with commerce represented by three-dimensional structures and building flats

The Atlas O no. 6921 double-track truss bridge spans the entry to the control panel area. For details on building a removable bridge for this location, see Peter Riddle's feature, "Build lift-out sections" in the December 2006 issue of CTT
